The recent publication of a thorough treatment of the herpetofauna of Georgia (Jensen et al. 2008) provides a basis for documenting new county records. Herein, we document new county records for Georgia amphibians and reptiles, provide voucher specimens for several counties lacking museum records, and provide a county record update. Unless otherwise noted,

all specimens were verified by Lance D. McBrayer and were deposited in the Georgia Southern University (GSU) collection, Statesboro, Georgia. New county records and county updates were determined by consulting Williamson and Moulis (1994) and Jensen et al. (2008). Records are the first for each county unless otherwise indicated. Geocoordinates are approximations derived from Google Earth.
